SUMMARY

Full-stack Software Developer with hands-on experience building production-grade web applications using React, TypeScript, FastAPI, PostgreSQL, and AWS. Delivered two internal platforms covering HR operations and cloud infrastructure workflows, implementing authentication, role-based access control, and scalable API integrations. Solid fundamentals in Java-based DSA, focused on writing efficient, maintainable code for product-oriented environments.

EDUCATION

NMAM INSTITUTE OF TECHNOLOGY **CGPA:8.35**

BE in Computer science and Engineering 2020 – 2024

TECH STACK

Languages: Java, Python, JavaScript (ES6+), SQL, HTML, CSS

Frontend: React 18, Vite, React Router, Axios, Tailwind CSS

Backend: FastAPI, SQLAlchemy, Alembic, APScheduler, REST API design

Database: PostgreSQL

Cloud / AWS: EC2, S3 (presigned URLs), Cognito, IAM,SNS

DevOps and Tools: Git, GitHub, GitHub Actions, Postman, VS Code

EXPERIENCE

Software Developer | **JIT Global Infosystems** *Jul 2024 – Present · Chennai*

- Delivered a production HR operations platform (JIT IOS) using React 18, TypeScript, FastAPI, and PostgreSQL implementing authentication, employee lifecycle workflows, task management, and document handling.
- Developed the frontend for an infrastructure deployment platform (RID) using React 18 and TypeScript, integrating REST APIs for instance configuration workflows with structured request payload handling.
- Integrated 30+ REST APIs using a centralized Axios client with interceptors for authorization headers, unified error handling, and reusable API configuration patterns across applications.

PROJECTS

JIT IOS — HR Operations Platform | *React 18, TypeScript, FastAPI, PostgreSQL, AWS S3, SQLAlchemy, Alembic,APScheduler*

- Built a full-stack HR operations system managing employee life cycle flows including authentication, assets, leaves, tasks, invoices, onboarding documents, and notifications.
- Designed scalable backend architecture using SQLAlchemy ORM with Alembic migrations, background jobs via APScheduler, and secure document access using short-lived AWS S3 presigned URLs.

RID — Rapid Infrastructure Deployment | *React 18, Vite, Tailwind CSS, REST APIs, AWS (EC2, EBS, AMI, VPC, Security Groups)*

- Developed a role-based cloud operations platform enabling teams to provision and manage AWS infrastructure through an approval-driven workflow dashboard.
- Implemented approval workflow engine, polling hooks with timeout handling for real-time status updates, and enforced credential validation with role-based route guards across multi-account environments.

Portfolio Website | *React, TypeScript, Tailwind CSS, Framer Motion, React Router* *Project Link*

- Built a responsive personal portfolio using React with component-based architecture and reusable UI sections for projects, skills, and contact.
